TITLE	Oklahoma School Testing Program. Summary Report: 1986. Metropolitan Achievement Tests, Grades 3, 7, 10.
INSTITUTION	Oklahoma State Dept. of Education, Oklahoma City.
PUB DATE	86
NOTE	789p.
PUB TYPE	Reports - Research/Technical (143) -- Statistical Data (110)
EDRS PRICE	MF05/PC32 Plus Postage.
DESCRIPTORS	*Achievement Tests; *Educational Assessment; *Educational Testing; Elementary Secondary Education; Grade 3; Grade 7; Grade 10; Program Implementation; Scores; State Norms; *State Programs; Tables (Data); *Testing Programs; Test Interpretation; Test Selection
IDENTIFIERS	*Metropolitan Achievement Tests; Oklahoma; *Oklahoma School Testing Program

ABSTRACT

The first annual administration of Oklahoma's School Testing Program is described, and the results for 1985-86 are summarized. The Metropolitan Achievement Tests were administered in grades 3, 7, and 10. Extensive appendices, which make up the bulk of this document, present: (1) suggested learner outcomes for the subjects tested--reading, language arts, mathematics, science, and social studies; (2) norms for the state of Oklahoma; (3) average school district score data for the tests and subtests for Oklahoma students in grades 3, 7, and 10; (4) percent of scores under the normal curve equivalent scores; and (5) a 19-page guide to interpreting the test results. Data for the total testing program indicate that 609 of 613 public school districts returned testing documents and answer sheets. About 40,000 students were tested in each grade level. The average scores for 3rd, 7th, and 10th grade students placed their performance levels above national norms on all subtests except one; the tenth grade vocabulary average was equivalent to the 47th percentile. The Oklahoma students' greatest strengths appeared to be in language, science, social studies, and research skills. (GDC)

JOHN M. FOLKS
Superintendent
LLOYD GRAHAM
Deputy Superintendent

To the Citizens of Oklahoma:

I am pleased to submit this Summary Report of the first annual Oklahoma School Testing Program. This program was implemented in compliance with Title 70 O.S. 1981 § 1210.505 et. seq. (House Bill 1466).

We are encouraged with the test results shown in this report for the school year 1985-86. As you will see, the results at each grade level in reading, language arts, mathematics, science, and social studies demonstrate that Oklahoma students in grades 3, 7, and 10 are performing above the national norm. The one exception to this level of performance was found to be in vocabulary at the 10th grade level.

The development and successful completion of the Oklahoma School Testing Program can be attributed to the full cooperation of teachers and school administrators in our 613 school districts across the state. For this support and cooperation we are deeply appreciative.

To all who were involved in the implementation of this program--state and local educators, parents, and students themselves--we extend our thanks.

Sincerely,

John M. Folks

John M. Folks
State Superintendent

SUMMARY REPORT FOR THE OKLAHOMA SCHOOL TESTING PROGRAM--1986

I. Introduction

A. History of Statewide Assessment in Oklahoma

A formal statewide student testing program had never been instituted in Oklahoma prior to the 1985-86 school year. However, the State Department of Education conducted a number of studies during the past 10 years to determine the status of student achievement in the basic skills.

- A 1976 report to the Legislature charted the 1970 achievement status of students in grades 4, 8, and 11, and the 1974 test results of students in grades 3, 6, 9, and 12. These data, gathered from schools' annual Standardized Achievement Testing Programs, indicated that Oklahoma students were achieving at levels above national norms.

- During the school years 1977-78 and 1978-79, studies were conducted to determine the achievement status of students in reading and mathematics. Using stratified random sampling to select school districts, the California Achievement Test was administered at grades 3, 6, 9, and the Senior High Assessment of Reading Performance was administered at the 12th grade level. As was indicated in previous studies, the performance of Oklahoma school students was found to be above national norms.

- A statewide achievement test survey was conducted in the spring of 1984 to determine the following: (1) which schools regularly test; (b) what standardized achievement tests are being administered; (c) the grade levels being tested; (d) the skill areas being assessed; and (e) the costs of such programs. It was found that of the 457 Oklahoma school districts responding to the survey, all were regularly administering standardized achievement tests. The majority of those responding were testing

7

annually, while others were testing every two years and a few were testing every three years. Reading, mathematics, language arts, science, and social studies skills were being measured. Results from these tests were expressed in norm-referenced data (e.g., percentiles, grade equivalents, stanines, and normal curve equivalents). According to the survey, data were used primarily to group students for instruction at appropriate levels.

B. Inception of the Oklahoma School Testing Program--Legislation

1. Oklahoma House Bill 1480, passed during the 39th Legislative Session, required the State Department of Education to submit a plan for a statewide assessment of students' achievement in the basic skill areas as specified in Section 11-103 of Title 70 of the Oklahoma Statutes. This plan addressed the following:

   - definitions of various components of the testing program
   - estimated costs of the program
   - grade levels to be tested and timelines for implementation
   - procedures for implementation at the state and school district level
   - suggested tests to be utilized whereby data will be consistent statewide
   - reporting procedures by school districts to the State Department of Education
   - anticipated benefits which can be achieved through the Oklahoma School Testing Program (OSTP).

   Three options for kinds of tests to use and populations to be tested were described in the plan:

   - the development of an Objectives-Based Norm-Referenced Test to be administered to all students in three grade levels based on a three-year phase-in plan
   - the administration of a standardized, norm-referenced test battery to a random sampling of students in three grade levels, based on a one-year phase-in
   - the development of a criterion-referenced test to measure specific learning objectives to be administered to all students in three

different grade levels, based on a three-year phase-in in combination with the administration of a standardized, norm-referenced test battery to a random sample of students in the same grade levels each year.

2. Oklahoma House Bill 1466, passed during the 40th Legislative Session, mandated that the State Department of Education implement the Oklahoma School Testing Program--a program within which a standardized, norm-referenced test would be administered to students in grades 3, 7, and 10. Based on this law, the program was delineated as follows: (quotation marks indicate direct wording from this act)

   DESIGN: "The Oklahoma School Testing Program shall be designed to assess student academic achievement and shall consist of a norm-referenced test with nationwide standardized data to be administered on an annual basis...Tests held pursuant to the provisions of the Oklahoma School Testing Program Act shall not include the use of projective psychological, personality, or adjustment tests for the purpose of collecting information relative to the personality, environment, home life, parental or family relationships, economic status, religious beliefs, patriotism, sexual behavior, or attitudes, or sociological problems of a pupil."

   PURPOSE: "The purpose of the state testing program shall be to afford a component for use along with other pertinent data in evaluating the effectiveness of public schools as shown by the competence and progress of pupils in basic skills."

   SKILLS TO BE MEASURED: The tests used "shall measure specific skills represented by learner objectives. The student skills to be tested at the specified grade levels shall include reading, mathematics, language arts, communications, science and the principles of citizenship in the United States and other countries through the study of the ideals, history and government of the United States and other countries of the world, and through the study of the principles of democracy as they apply in the lives of citizens."

STUDENTS TO BE TESTED: "Beginning with the 1985-86 school year, the Board shall cause a norm-referenced test to be administered to every student enrolled in grades 3, 7, and 10 of the public schools of this state. Children who have Individualized Education Plans (IEP) pursuant to Public Law 94-142 shall not be subject to the provisions of the Oklahoma School Testing Program Act."

Due to the effects of Federal Law (Section 504 of the Rehabilitation Act of 1973, 29 U.S.C. 706, regarding the prevention of discrimination against the handicapped), the State Department of Education issued the following guideline for schools: (Superintendent's Newsletter, December, 1985)
"While H.B. 1466 states that children who have IEP's pursuant to P.L. 94-142 are not subject to the provisions of the Oklahoma School Testing Program Act, any student with an IEP who participates in the curriculum areas covered by the tests may be given an opportunity to take the test. However, administrators would have to get parental permission prior to testing. Discretion rests with the local district on whether IEP children may be given the opportunity to participate."

FUNCTION: "Through applied research, the testing program should function ultimately to improve all phases of the state public educational system...The State Board of Education shall seek to ensure that data yielded from the test is utilized at the school district level to prescribe skill reinforcement and/or remediation by requiring school districts to develop and implement a specific program of improvement based on the test results."

INSERVICE TO BE PROVIDED: "The Department shall provide inservice training for local school personnel who administer the tests."

REPORTING: "The Board shall require the company or companies providing the tests to submit summary reports of the results by school district to the Department and the respective local school district. Individualized results of the test shall be made available by the local school district to the classroom teachers who instruct the students in the academic areas tested. Beginning with the 1986-87 school year, every year prior to the convening of the Legislature in January, the Board shall give a summary report on the testing results to the Governor, the Speaker of the House of Representatives and the President Pro Tempore of the Senate of the State of Oklahoma."

C. Use of Standardized Tests: Weighing the "Pros" and "Cons"

A standardized test is one which has been constructed in accord with detailed specifications--one for which the items have been selected after tryout for appropriateness in difficulty and discriminating power. It is accompanied by a manual giving definite directions for uniform administration and scoring, and one which is provided with relevant and dependable norms for score interpretation (Ebel and Frisbie, 1986). Such tests provide data which indicate relative rankings among students based on their performance. Such rankings yield comparisons of individuals' scores (as well as average scores for groups) with their peers at the class, grade, building, district, state, and national levels.

1. In regard to administration of such tests, factors on the positive side include the following:

   - As stated in A Nation at Risk: The Imperative for Educational Reform (National Commission on Excellence in Education, 1983) "Standardized tests of achievement (not to be confused with aptitude tests) should be administered at major transition points from one level of schooling to another and particularly from high school to college or work. The purposes of these tests would be to: (a) certify the student's credentials; (b) identify the need for remedial intervention; and (c) identify the opportunity for advanced or accelerated work. The tests should be administered as part of a nationwide (but not Federal) system of State and local standardized tests."

   - Currently 38 of the 50 American states conduct statewide assessment to determine students' achievement levels in the basic skills (Beverly Anderson, Educational Commission of the States, 1986). Most of these states employ standardized tests to determine the achievement progress of students in the public schools. Such information is useful "because it helps to inform students, teachers, administrators, and the public at large of the educational efforts in their schools" (Ebel and Frisbie, 1986).

- Linn (1983), in differentiating between the function of teacher-made tests and standardized achievement tests, stated "for the school or district as a whole, the traditional standardized test provides a general summary of the achievement of its students. By themselves, the scores do not reveal anything about the causes of performance, but they do provide a general reading of the current status in comparison to the nation at large. By comparison of scores from one year to another, the school or district can also get an indication of improvement or decline in performance."

- Through the use of computers for scanning and scoring, reports of test results can be customized to yield desired data on a variety of skill categories. To accomplish this, test item data from any of the subject area subtests can be pooled to yield results on such categories as research skills, higher order thinking skills, and any specific learner objectives which were measured by the tests. The availability of such specific information increases a school's potential for helping students improve in their acquisition of basic skills.

- The results of standardized tests can be used to determine the apparent effectiveness of specific instructional programs and efforts exerted toward educational reform. The analysis and use of such data in decision-making can aid in increasing the cost efficiency of our schools.

- The benefit to students resulting from taking a standardized test can be enhanced if they and their parents are given feedback on test results. In addition, such sharing of results (as is the goal in the OSTP) can encourage students to take responsibility for much of their own skill reinforcement and learning--a factor which greatly enhances their potential for improvement.

- To enter many professions, students will be expected to pass tests. Test-taking in itself involves a set of skills which can be sharpened and improved with practice. The annual administration of standardized tests serves to prepare students for taking college entrance tests as well as examinations to qualify in such fields as real estate, accounting, plumbing, electrical work, law, medicine, and others.

2. There are certain cautions which should be noted in the administration of standardized tests and the interpretation and use of such data:

   - Standardized, norm-referenced achievement test batteries are designed to be used nationwide. Since there is no established "nationwide curriculum," it is highly unlikely that the objectives on which a given standardized test is developed will exactly fit the curriculum of any specific school, district, or state. This lack of correlation can often result in lower student performance than that which would be obtained from the administration of a teacher-made test which is tailored to the course and objectives being taught.

     NOTE: Performance of the national norm group would be affected similarly from this condition (since this group represents a random sampling of students from all sizes and conditions of school districts across the nation). Therefore, the national norm with which local student performance is compared on each subtest would reflect similar effects--a factor which should not penalize students in school districts which can offer a varied curriculum.

   - Failure to control certain necessary standardized test conditions can yield invalid results. Necessary conditions to control during test administration include (a) physical environment (room temperature, lighting, noise level, and overcrowding of students), (b) emotional environment (diminishing test anxiety and motivating students through positive attitudes on the part of parents, teachers, and school administrators), and (c) test administration procedures (giving directions accurately, observing strict timing of tests, and monitoring students' test-taking behaviors). Appropriate precautions regarding the control of all conditions mentioned above are discussed in the pretest Inservice Manual which was provided for all test administrators prior to testing.

- Standardized test results represent estimates of student achievement levels only at the time the test was given and for a period of a few weeks. With the passage of time, accumulation of additional knowledge, and improvement in basic skills, students' test scores can change measurably. Therefore, neither individual students, school buildings, nor entire school districts should be permanently labeled or judged based on the single administration of a standardized test.

- It is neither equitable, meaningful, nor appropriate to compare the performance of individual schools or school districts with one another without considering certain demographic factors which are known to exert influence on test results (Jenks, 1972; White, 1976). These factors include socioeconomic level of the community, median income, and median educational levels of community members. In addition, where small numbers of children are tested, the abilities of one or two students can affect the overall percentile ranking of any grade level in that district. Furthermore, the mobility of families can have an effect on the overall percentile ranking of the school district.

  In general, the higher the socioeconomic level of the community is, the greater the median income; and the higher the median educational level of the community is, the more likely the students in that school district are to score higher on achievement tests. The test data contained in this report could not be treated statistically to equalize the effects of those factors listed above. Under these conditions, it is both meaningless and inappropriate to compare the performance of students in specific schools or school districts to determine the effects of instructional programs.

II. Implementation of the Oklahoma School Testing Program Act

Objectives for accomplishing the successful implementation of the Oklahoma School Testing Program Act included the following:

- To obtain a test which would meet the specifications outlined in House Bill 1466.
- To provide a system whereby tests would remain secure.
- To provide inservice for all test administrators as outlined in the law.
- To provide a system for dissemination and return of test materials.
- To accomplish a valid administration of the tests.
- To provide a system for scanning answer documents, scoring, and reporting results to local schools.
- To analyze, interpret, and report statewide results to the State Board of Education and the Legislature.
- To provide follow-up inservice on the interpretation and use of test results at the local school level.
- To aid schools in incorporating the use of test scores in their Five-Year School Improvement Plans.

The procedures utilized to accomplish these objectives are described in the following section.

A. The Request for Proposals (RFP)

By definition, the RFP represents a blueprint for implementation of the OSTP as it communicates to test publishers all program needs and requirements and serves as a basis on which interested bidders draft their proposals. In compliance with Oklahoma Law, a Request for Proposals (RFP) was developed and released to test publishers nationwide on September 16, 1985.

Included within the RFP were bid specifications for the following:

- Purpose of the RFP.
- Overview of the OSTP (name, design, purpose, function, students to be tested, and skills to be measured as specified in H.B. 1466).

- Test Review and Selection Process (specific criteria on which materials, services, and time lines would be judged; requirements placed on bidders to respond to criteria; the number of committees conducting the evaluation and the number of educators per committee).
- Major products and services for which bids are required (correlations of the test items with Oklahoma's Suggested Learner Outcomes; test materials, technical manuals, and parent pre-test information; systems for distribution and return of materials and maintaining test security; scanning, scoring, and reporting of results; and plans for training State Department inservice personnel and developing inservice manuals).
- Required time schedule for delivery of materials and services.
- Cost information and certification.
- Review of bids and selection of contractor (a description of the process).
- Program modifications procedure.
- Instructions to bidders regarding submission of proposals, proposal format, RFP schedules, mandatory requirements, and contract information.
- Bid Price Sheet.

A "mandatory attendance" Pre-Bid Conference was held for all interested bidders on September 27, 1985. All bidders' questions received prior to this conference and the Department's responses were submitted in writing. All requirements of the OSTP were discussed and bidders were allowed to clarify all misconceptions regarding bid requirements.

B. The Test Review and Selection Process

The initial goal of the Test Review Process was to obtain an objective evaluation of all companies' bids for products and services with regard to the instructional value and validity of the tests. Therefore, cost estimates were not shared with reviewers until their evaluations and recommendations had been completed.

The design of the review process was based on the need to:

- evaluate based on appropriate criteria

- utilize reviewers who were thoroughly qualified to judge (based on each set of criteria)
- provide the necessary time for sufficient exposure to the materials and services being bid to obtain a valid evaluation.

Two separate two-day meetings were held for the purpose of conducting the independent reviews:

1. Curricular Review (October 29-30, 1985)

   a. Reviewers

   Sixty-five teachers and school administrators serving grades 3, 7, and 10 were invited to conduct the curricular validity review. These reviewers were selected from among those educators who developed and/or validated the Oklahoma Suggested Learner Outcomes at grades 3, 7, and 10. Seven State Department of Education curriculum specialists were pre-trained and served as chairmen of the 15 "subject-by-grade level" subcommittees.

   b. Summary of Criteria Used for the Curricular Review

   - Closeness of match of test items with the Suggested Learner Outcomes
   - Quality of test items in regard to freedom from ethnic or geographic bias, passage dependency, dependence on knowledge of technical vocabulary, and measurement of higher order thinking skills.
   - Quality of test format in regard to type size, layout, question/answer placement, and appropriateness for the specified grade level.
   - Quality of report formats in regard to their ease of interpretation and use at appropriate levels within the school setting.
   - Quality of manuals for test administrators, test coordinators, and inservice personnel in regard to their use in administering tests, interpreting data, and applying test results for program improvement.

2. Review of Technical Factors and Proposals (November 4-5, 1985)

a. Reviewers

The Oklahoma School Testing Program Advisory Committee conducted the technical review. Comprised of 18 educators (classroom teachers, directors of testing for large school districts, counselors, psychometrists, a university professor, and a vocational-technical school teacher), this committee had served to critique the original Plan for OSTP and the Request for Proposals before its official release.

b. Summary of Criteria Used for the Technical Factors and Services

- Level of quality regarding such technical factors as reliability, validity, item analysis, time limits for subtests, equating methods, kinds and useability of scores, and the provision of aids for the interpretation and application of test data for program improvement.
- Quality of manuals for test administrators, test coordinators, and for providing inservice programs.
- Quality and variety of ancillary services available (test linkages with texts on our state adopted list; computerized services for regrouping/reaggregating of data).
- Appropriateness of management systems offered for accomplishing the distribution and retrieval of testing materials, for solving technical problems, and for scanning, scoring, and reporting.
- Adequacy of credentials in regard to experience in producing quality tests and administering large-scale assessment programs in other states.
- Quality and appropriateness of test formats for students at the targeted grade levels and report formats for employment in interpreting and using data at the individual student, class, building, district, and state levels.

3. Result of the Review/Selection Process

Based on the recommendation resulting from the evaluations conducted by the 80 reviewers, the State Board of Education adopted the Metropolitan Achievement Test--6th Edition, published by The Psychological Corporation, as the series of tests to be administered in the Oklahoma School Testing Program. These instruments are described in full below.

C. Description of the tests (Source: Interpreting the Reports: A Guide, Psychological Corporation, 1986)

The Metropolitan Achievement Tests are overall measures of achievement in the basic skills of reading, mathematics, language arts, science, and social studies. In the Oklahoma School Testing Program, all of these skills are tested. These tests are nationally normed tests and, as such, are designed to be administered on a group basis to students functioning in the mainstream classroom. The norming sample included exceptional students in proportion to their appearance in the national school population (except those designated as Trainable Mentally Handicapped or Severely/Profoundly Mentally Handicapped) to the extent it was feasible for these students to take tests under prescribed standardized testing conditions. The Metropolitan Achievement Tests have alternate and equivalent forms--L and M. Each equivalent form measures the same subject areas and has the same number of items.

The tests are designed to measure the achievement of Oklahoma's students on a scale that allows comparison to a national norm sample which was selected to be representative of the nation's students in each of the grade levels tested. Thus, as norm-referenced tests, the tests provide a method for comparing the achievement of pupils in any class with that of typical pupils of the same age and grade.

1. The Test for Third-Grade Students

The third-grade test, Metropolitan Achievement Test, 6th Edition (MAT-6) Elementary Level, includes three reading tests: Vocabulary, Word Recognition Skills, and Reading Comprehension. These three reading tests combine to yield a Total Reading domain score. There are three mathematics tests: Concepts, Problem Solving, and Computation. These three tests combine to yield a Total Mathematics domain score. In the Language area, there are two tests: Spelling and Language, which combine to yield a Total Language domain score. In addition, this test assessed abilities in Science and Social Studies.

The scores on these three domains (Reading, Mathematics, and Language) combine to yield a Total Basic Battery score. When Science and Social Studies are also administered, as they are in the Oklahoma School Testing Program, a Total Complete Battery score is derived from the five domains.

2. The Test for Seventh-Grade Students

The seventh-grade test, MAT-6 Advanced 1, includes only two reading tests, Vocabulary and Reading Comprehension, which combine to yield a Total Reading score. The other tests at this level measure the same areas as those described above for the Grade 3 test (MAT-6 Elementary Level).

3. The Test for Tenth-Grade Students

The tenth-grade test, MAT-6 Advanced 2, includes two reading tests--Vocabulary and Reading Comprehension, a Mathematics test, a Spelling test, a Language test, a Science test, and a Social Studies test. The Reading Comprehension and Vocabulary tests combine to yield a Total Reading score. The Language and Spelling tests combine to yield a Total Language score. Total Basic Battery and Total Complete Battery scores are also provided based on the test combinations described for the Elementary and Advanced-1 levels.

In addition to yielding the combinations of scores mentioned above, the MAT-6 tests for all three grade levels (3, 7, and 10) yield scores on Research Skills and Higher Order Thinking Skills. Measurement of such skills and data-gathering procedures are described below:

RESEARCH SKILLS: This score is derived from combinations of items across several MAT-6 tests. The score is produced from the Graphs and Statistics items in the Mathematics: Problem Solving test (Mathematics test at the Advanced-2 level), the Reference Skills items in the Language test, and the Inquiry Skills and Critical Analysis items from the Science and Social Studies. (Source: Interpreting the Reports: A Guide, The Psychological Corporation, 1986. See Appendix G.)

HIGHER ORDER THINKING SKILLS: This score is also derived from combinations of items across various MAT-6 tests. The Higher Order Thinking Skills require the student to compare, contrast, synthesize (to pull information together from more than one source) or evaluate knowledge; to demonstrate metacognition (analyze the thinking process to determine for example, how a problem is worked), or to derive the solution rule in order to answer the item. The MAT-6 Compendium of Instructional Objectives lists by item number within tests all of the items at each test level that have been included in the Higher Order Thinking cluster. (Source: Interpreting the Reports: A Guide, The Psychological Corporation, 1986. See Appendix G.)

One example of a Higher Order Thinking Skill that requires a combination of analytical skills is hypothesizing. This skill is used to determine possible consequences of actions either before or after taking an action. For example, a chemistry experiment may begin with a hypothesis such as "If I mix these chemicals together, the result is likely to be that the mixture will (a) boil, (b) explode, or (c) there will be no change." Hypothesizing before taking action, therefore, is a form of making predictions about "what will happen as a result of that which I am about to do." Forming such hypotheses requires (a) synthesis (pooling similar information from different sources--experience, information learned through reading or research, and/or information gained from oral instruction); (b) analysis--studying all sides of an issue or other phenomena to determine all known factors relating to it; (c) critical thinking--rationally weighing all factors to find possible solutions or answers; (d) evaluation--making judgments to determine the best of all courses of action to take before proceeding; and (e) decision-making--utilizing all information one has gathered and weighed to settle on one or more courses of action to take.

It should be noted that the MAT-6 tests were designed on the philosophy that the tests should measure accumulated knowledge and skills which are necessary and pertinent to each of the specific subject or basic skill areas tested rather than measuring reading skills in every test.

D. Communicating With the Schools: Providing Awareness and Instruction

1. AT MEETINGS: Beginning with the Superintendents' and Principals' Summer Workshops and throughout the school year, awareness presentations were made statewide to inform schools about the Oklahoma School Testing Program and its implementation. These focused on the rules and responsibilities of the State Department of Education, the local schools, and The Psychological Corporation in the process.

2. IN PRINT: Through press releases to the newspapers, articles placed in the Educator and the Superintendent's Newsletter, and letters to the schools, the questions of local school personnel were answered as soon as information was available. These communiques also included guidelines for implementing each phase of the program.

   One such communique with the schools included a survey to determine (a) number of students to be tested at each of the grade levels 3, 7, and 10; (b) number of teachers and/or counselors who would be administering the tests at each grade level; (c) date chosen for administering the tests in each school district (of the three offered); and (d) names and addresses of Building and District Test Coordinators. This information was used to provide the test publisher with the needed information for mailing testing materials to schools.

3. PRE-TEST INSERVICE PROGRAM: In compliance with House Bill 1466, a pre-test inservice program was conducted for all Test Administrators, Building and District Test Coordinators, and School Administrators. Topics covered in this inservice included the following:

- background of the OSTP--legislation and plans for implementation
- creating a testing environment which insures validity
- how to administer the tests (and practice tests for 3rd grade)
- working with parents (sharing the Parent Pre-test Folder and Parent Copy of test results)
- handling the materials (receiving and distributing tests; coding the machine-scanned header sheets; checking answer sheets for random marks; proper packaging of materials for mailing; how, where, and when to mail the various testing components)
- kinds of reports schools will receive, who will receive them, and the kinds of scores that will appear on each; procedure for reporting at the state level
- motivating all involved in the program to take a positive view
- test-taking skills relevant to multiple-choice tests.

To prepare for this inservice, the Psychological Corporation developed a manual and conducted a six-day (two-part) training program for the State Department Reading Staff. During January and February, 1986, these Department personnel conducted 354 inservices with more than 8,500 educators, offering opportunities for appropriate staff members from all school districts to participate. The inservices were held in two separate two-hour sessions for each district (or cluster of districts)--one for school personnel serving grade 3 and one for those serving grades 7 and 10. Each participant was provided with the Inservice Manual customized for the OSTP by The Psychological Corporation.

E. Administration of the Tests

The tests were administered during March 11-13, 18-20, and 25-27, 1986. Each school district chose a specific one of the three dates based on noninterference of spring breaks and local board mandated nine-weeks' tests. Dates for testing were designed to provide sufficient time for returning materials, scanning, scoring, and reporting the data prior to dismissal of schools for the summer. To provide for test security, the tests were mailed directly to school districts from The Psychological Corporation and returned immediately after the test administration was completed.

In addition, security of Form M for administration within the OSTP was also guaranteed by the State Department of Education's requirement that The Psychological Corporation refrain from sampling or selling Form M to Oklahoma school districts for use at any grade level.

ADDITIONAL MATERIALS USED: In addition to providing test booklets (consumable at grade 3), answer sheets for grades 7 and 10, and Test Administration Manuals, the schools were supplied with Parents' Pre-test Folders for all grades and Practice Tests for third-grade students. The two latter sets of materials, distributed prior to the the test dates, offered examples of kinds of test items which students would encounter and suggestions for test preparation.

TIME UTILIZED IN ADMINISTERING TESTS: The time consumed in administering the tests varied from grade to grade. Test administrators were admonished to follow the schedule which was designed for administering the tests and strictly observed during the standardization process: (times are recorded in number of minutes)

GRADE LEVEL	# of SUBTESTS	PREPARATION TIME	TESTING TIME	TOTAL
3	10	90 minutes	254 min.	344 min.
7	9	90 minutes	244 min.	334 min.
10	7	70 minutes	190 min.	260 min.

F. Reporting Test Results: Methodology

In locally funded testing programs, district superintendents have customized their test reports by ordering the kinds of scores which are most appropriate for interpretation and use in their own situations. The State Department of Education, in order to provide a variety of reports and kinds of scores sufficient to satisfy the needs of all Oklahoma school districts, customized the Oklahoma School Testing Program's reports to yield the following information: (see Appendix G, Interpreting the Reports: A Guide, The Psychological Corporation, 1986, for a guide to report formats and definitions of scores).

1. Parent Report

   SCORES: (Individual Tests and Totals) Raw Score; National Percentile Rank and Stanine; State Percentile Rank and Stanine; National Percentile Bands; Instructional Reading Level (IRL); and Instructional Math Level (IML).

   USE: This report can be used to inform parents of students' performance in each of the areas tested. It has been suggested that schools share the Parent Report during a conference in which plans for remediation, skill reinforcement, additional academic challenge, or other needed instructional changes are discussed.

2. Individual Report

   SCORES: (Individual Tests and Totals) Number of Items; Raw Score; National Percentile Rank and Stanine; National Normal Curve Equivalent; State Percentile Rank and Stanine; Grade Equivalent; National Percentile Bands; Independent, Instructional, and Frustration Reading Levels; Reading Performance by Grade Level of Reading Passages (Passage, Raw Score/Number Possible); Higher Order Thinking Skills (LOW--Stanines 1-3, AVERAGE--Stanines 4-6, and HIGH--Stanines 7-9); and Instructional Mathematics Level.

   SCORES: (by clusters of skills per test) Raw Score/Number Possible; and an indication of LOW, AVERAGE, or HIGH for each cluster.

   USE: This report can be used by teachers to determine students' strengths and weaknesses in the overall basic skill areas as well as in specific clusters of skills within each area. These performance levels can serve as indicators of the need for further diagnosis to determine specific skill reinforcement work needed by each student.

CAUTION should be observed in using the Grade Equivalent Score for any activity other than building rank-ordered lists of students based on their performance. Based on the way the Grade Equivalent Scale is constructed, it is not a reliable tool for placing students in materials. (A comparison of students' Grade Equivalent Scores with the IRL will often reveal vast differences, with the IRL being the more accurate. An examination of the "Reading Performance by Grade Level Passages" will reveal the readability level at which the student's skills began to break down, thus indicating the rationale for his or her IRL estimate.)

3., 4., and 5: Class, Building, and District Summaries

FORMAT: The Individual Report Format was used to provide group score summaries at the class, building, and district level.

SCORES: Differences in the individual and group formats include Median Grade Equivalents (instead of individual student's Grade Equivalent); Stanine Bands (instead of Percentile Bands); summaries of number and percent of students in IRL, IML, and Higher Order Thinking Skill Categories (LOW, AVERAGE, and HIGH) instead of individual scores; and number or percent of students scoring in the LOW, AVERAGE, and HIGH categories in the "Skill Cluster" section.

USE: These reports can be used by teachers and school administrators to determine instructional program strengths and weaknesses. Goals and objectives for implementing needed program changes can be based on group data findings. Furthermore, the IRL and IML group summaries can serve as a preliminary indicator to estimate the various levels (and number at each level) of instructional texts and other materials needed.

6. Ranked List of Three Scores (Grade 3--Class Level; Grades 7 and 10--Building Level)

FORMAT: This is a two-page report, the first page of which lists TOTAL TEST SCORES for Reading, Mathematics, and Language. The second page lists TOTAL TEST SCORES for Science, Social Studies, and Research Skills. Students are listed in RANKED ORDER from high to low score in each of the test areas.

SCORES: Raw Score, National Percentile Rank and Stanine, and National Normal Curve Equivalent. The last page of each half of this report offers summary statistics for the entire group in each test area.

USE: This report can be used to help determine appropriate placement of students in remedial, developmental (on-grade-level), and/or accelerated classes (advanced or gifted classes). CAUTION should be used in placement; such action should be followed by additional checks to determine the accuracy of groupings formulated.

The first of its kind received by schools in Oklahoma, this report should be most useful to teachers and counselors who schedule students into departmentalized classes. The separation of ranked lists by subject areas allows for greater use among teachers who instruct all students in a given subject and grade.

7. Master List of Test Results (Class at Grade 3; Building at Grades 7 and 10)

   FORMAT: Students are listed alphabetically within classes (Grade 3) or at the building level (Grades 7 and 10).

   SCORES: Data are provided for each student on each subtest, Total Test, Total Basic Battery (combination of Reading, Language, and Mathematics), and Total Complete Battery (all subtests combined). Scores include Raw Score/Number Possible; Scaled Score; National Percentile Rank and Stanine; National Normal Curve Equivalent; State Percentile Rank and Stanine; Grade Equivalent; IRL; and IML. Group Summary Statistics are given at the end of this report.

8. Record Label

   This report is a gummed label for students' permanent record files. Scores displayed on the Record Label are the same as those listed for individual students on the Master List of Test Results.

9. Group Item Analysis (Class, Building, District at Grade 3; Building and District at Grades 7 and 10)

FORMAT: Group performance is indicated by individual test items for each subtest. Items which measure the specific skills within each cluster of skills are listed by item number.

SCORES: Performance levels are expressed in (a) local percent correct and (b) national percent correct for individual items as well as clusters of items. Significant differences in local school performance and national norm group performance are indicated by arrows (▲ for "higher," ▼ for "lower") and spaces for "no significant difference." The percent of items omitted (not attempted) by students is indicated.

USE: Group performance data on individual skills can be used to find major strengths and weaknesses in instructional programs (the limitation being that the tests do not measure ALL of the skills needed by students at any given grade level). "Skill cluster" information can provide a useful tool for aiding with setting objectives and making decisions on programs of skill reinforcement and remediation.

10. Administrator's Data Summary (by grade level)

SCORES: On the first page, this report contains Raw Score, Scaled Score, Grade Equivalent, and National Normal Curve Equivalent statistics expressed in Means, Standard Deviations, and group scores equivalent to the following percentile points on the scale: 90th, 75th (3rd Quartile), 50th, 25th (1st Quartile), and 10th.

The second page displays the following:

a. Percentile Rank and Stanine of Mean State NCE
b. In terms of both National and State Percentile Ranks, a summary indicating the number and percent of students scoring in Percentile Rank categories of 76-99, 51-75, 26-50, and 1-25.
c. In terms of both National and State Stanine Bands, a summary indicating the number and percent of students scoring in Stanines 7-9, 4-6, and 1-3.

The third page of this report displays IRL and IML summaries indicating the number and percent of students whose instructional levels were estimated at each of the grade levels measured by the test.

USE: This information provides an explanation of the distribution of students' scores on the normal curve. Therefore, an administrator may compare the overall performance of his or her students with the distribution of scores that is expected of an "average" group of students--based both on the national norm and on an "average group performance" for Oklahoma.

11. Oklahoma Suggested Learner Outcome Reports (2)

    a. Class "Grid" (displays individual students' names with performance results for each of the Oklahoma's Suggested Learner Outcomes measured by the MAT-6). SLO Codes (from the SLO Guides) are displayed beside abbreviated statements of each outcome.

    SCORES for each SLO per student area: Number Possible--total number of items from all subtests within a given level of the test which measure each SLO; National Percent Correct (based on 100%, not to be confused with "percentile")--represents the average group performance of the national norm group; Number Correct--number of items each student answered correctly; Percent Correct--student's score per SLO, based on 100%.

    USE: Teachers can use this report to determine each student's performance level for each of the SLO's measured by the MAT-6. Offering "criterion-referenced" information, these data can be used to indicate which skills are needed by individuals, small groups within the class, or the entire class. The report enables teachers to accomplish flexible skill grouping to review, reteach, or remediate students based on the specific skills needed by each. Use of this information can be facilitated by establishing appropriate "cutoff" scores for determining the need to (a) omit a student from a reteaching session (due to his or her high proficiency level), (b) include the student in a "review" session, or (c) include the student in a session in which the teacher starts at the beginning and completely reteaches a skill. In considering use of scores on individual SLO's, CAUTION should be used in viewing any score on an SLO which was measured by three test items or less as a "final estimate" of the student's ability to apply that skill. Greater validity is established through use of information based on measurement (of a given skill) by four or more items.

b. Class Summary Report (offered at the class, building, and district levels)

SCORES: For each SLO measured by the combined subtests at a given level of the MAT-6, displayed are results on Number Possible; Number Tested (number of students tested on a given combination of items); Mean Raw Score (average number correct); Percent Correct (average percent correct for this particular group); and National Percent Correct (average performance level of the national norm group).

USE: The group summary SLO Report at any level can be used to identify skill strengths and weaknesses existing across a given group of students. This provides an opportunity for teachers and school administrators to plan needed program changes to stress and/or strengthen instruction in specific skills on which students scored below a desired proficiency level. Proficiency level "cutoff" points to divide scores into categories representing mastery, non-mastery, and deficiency can be established by districts based on local school philosophy and need. Instructional methods and materials can then be geared appropriately to these levels.

NOTE: Since the MAT-6 is a standardized test designed to be used throughout the United States, it does not measure ALL of the SLO's at any given level. Therefore, school personnel are advised to consider additional needed skills in planning for program improvement (e.g., those listed in the SLO Guides or in their own locally established skill sequence portion of the Curriculum Review)

This report is provided for all school districts of 2,200 Average Daily Membership or more. It indicates the number and cumulative percent of students scoring at each of the National Percentile Ranks. The distribution is arranged from high to low score and offers corresponding State Percentile Ranks.

USE: School administrators can use this report to determine the shape of their own groups' distribution curve. This local distribution can be compared at all points along the National Percentile Rank Scale to determine likenesses and differences in performance as compared with the national norm group.

G. Reporting State Level Data: Methodology

The following reports bear the scores listed for each matching report given above. Data on all of these reports are aggregated at the state level.

1. Region Summary--State of Oklahoma, Grades 3, 7 and 10
2. Group Item Analysis (number 9 above)
3. Administrator's Data Summary (number 10 above)
4. Suggested Learner Outcome Summary (number 11-b above)
5. Frequency Distribution (number 12 above)
6. List of Averages: these reports list school district results. One each for grades 3, 7, and 10 list school districts in alphabetical order by name of the district. Data include the Number Tested, Mean Raw Score, Mean Scaled Score, Median Grade Equivalent, and National Percentile Rank and Stanine of Mean National Normal Curve Equivalent for each Subtest, Total Test, Total Basic Battery, and Total Complete Battery. State level summaries, expressed in the same statistics, are provided at the end of each of these grade level reports. See Appendices A-E for State Reports 1, 4, and 6 listed above.

NOTE: Appendices C, D, and E of this report offer district level test results. Deleted from these reports were scores from school districts in which five or fewer students were tested at any given grade level. This was done to protect the privacy of students in those districts.

III. Summary of Results

A. Results of Document Returns

Of 613 public school districts in Oklahoma, the total set of documents for only 4 failed to reach National Computer Service (the scanning, scoring, and reporting subcontractor) in time to be reported with state level results. All were mailed and are assumed to be lost in transit.

Of the remaining districts, 12 experienced a loss or damage of documents at one or two of the grade levels tested. In each case, a readministration and later scoring of the tests was accomplished.

Oklahoma's public schools are to be commended for the prompt return of their answer documents. Of the 613 districts, 99.35 percent were represented in developing Oklahoma's state norms.

B. Number of Students Tested

Not all of the students in grades, 3, 7, and 10 were tested due to the following factors:

- Local school district option was offered in regard to testing students with Individual Education Plans (IEP's) pursuant to Public Law 94-142 (see page 6 of this report for a discussion of this issue).
- Makeup tests were not given to students who were absent during the test days.

The differences existing in enrollment figures as compared with number of students tested are indicated as follows:

Grade Level	Student Enrollment Fall, 1985*	Number of Students Tested**
3	44,800	40,745
7	44,055	39,609
10	46,022	39,739

*Source: State Department of Education Accreditation Reports, Fall, 1985

**Source: Maximum number of students answering any given set of items on the Suggested Learner Outcome State Level Report

C. Understanding the Data

1. Test Levels Used

At each grade level tested in Oklahoma, students were administered the most difficult test of the series for their respective grade levels. This phenomenon is illustrated below:

Grade Placement of Oklahoma Students	Test Level	Designed for Students At Grade Placement
3.7	Elementary	3.5--4.9
7.7	Advanced 1	7--9
10.7	Advanced 2	10-12

At grade 3, this was done to achieve the measurement of science and social studies. In grades 7, and 10 this was the only available option.

The use of such test levels does not affect our students' standings in relation to comparison with national norms since the norm group was at the same grade level as our students at the time of testing. However, evidence of our students' being in this position reveals itself in an examination of their raw scores.

2. Norms and Their Interpretation

Oklahoma's group scores for each of the grade levels are reported in terms of the AVERAGE score for that particular group of students. These scores are converted to national norms (e.g., national percentile ranks, stanines, normal curve equivalents, and median grade equivalents) to provide a comparison of Oklahoma's student performance levels with those of the national norm group.

The national norm group is a large group of students (e.g., 250,000 for the MAT-6) who are selected based on scientific random sampling. The goal of such random sampling is to achieve grade level groupings which represent a cross-section of the United States in terms of their mixture of geographic areas, socioeconomic levels, ethnic groups, urban/rural locations, and other differences existing among school districts.

The norming (standardization) process involves the administration of appropriate levels of the tests to students at each grade level in the national norm group. This group's average score on a given test at a particular grade level becomes the "norm" with which performance of individuals or groups of students in the same grades can be compared. (Example: the average score of students in the national norm group is represented by the 50th percentile rank, the 50th NCE, or a stanine of 5 on a particular test administered at a specific grade level. If Oklahoma students score a percentile rank of 60 on a particular test, our students are said to be performing at 10 percentile rank points above the national norm. Interpretation: our average student performed at a level equal to or better than 60% of the students who comprised the national norm group.)

3. Norm Scales Employed

Two kinds of norm scales were available for use: empirical (actual norms resulting from administration of the test to the national norm group in April of 1985) and interpolated norms for the week of testing (norms which have been statistically treated to estimate performance at times during the year other than when the national norm group took the tests). The use of empirical norms was chosen for the OSTP based on the following rationale:

(a) Although the empirical norms were based on an April administration of the tests, it was determined that, from the standpoint of months of instruction they had experienced, Oklahoma students were within a reasonable time span when they were administered the tests in mid to late March. Most of the students in the national norm group were enrolled in schools which begin in mid-September and dismiss in mid-June. Many Oklahoma schools begin in early to mid-August and dismiss in early to mid-May.

(b) The use of empirical norms facilitates comparison of scores from year to year to determine progress. Although the variance from "week" to empirical norms is small, it does exist. This factor can affect the stability of comparisons.

D. Summary and Interpretation of the Data

The average scores for 3rd, 7th, and 10th grade students participating in the OSTP place their performance levels above national norms on all subtests except one. The average Vocabulary Test score for 10th grade students was equivalent to the 47th percentile rank--three percentile points below the national norm of 50. Based on these scores, there is evidence of consistency in the emphasis placed on basic skills instruction in Oklahoma's public schools--especially at the elementary level.

- Table 1 (page 33) lists the performance levels of OSTP participants in each of the subjects and grade levels. The greatest strengths across the grades appear to be in Language, Science, Social Studies, and Research Skills (a stanine of 6 at 3rd grade, and 5 at grades 7 and 10, with percentile ranks between 53 and 56 for the two stanines of 5). In addition, students who took the MAT-6 scored at the 58th, 55th, and 55th percentile ranks in Reading Comprehension at grades 3, 7, and 10, respectively. The conflicting 9.9 median grade equivalent score for grade 10 students indicates that, in the distribution of data, there were many of the high-scoring students who scored extremely high--enough to bring the average NCE score to an equivalent 55th percentile rank. Thus, the numerically "middle" score in a list which is rank-ordered from high to low score falls below the norm (i.e., the students' grade placement at the time the test was administered).

- Figures 1, 2, and 3 (pages 34, 35 and 36) present a graphic representation of the data cited in Table 1. The percentile rank scales pictured on these Figures are irregularly shaped to represent the "clustering" of students' scores near the middle of the scale. That is, more of the scores occur in the middle range than occur at the extremes.

Spring, 1986

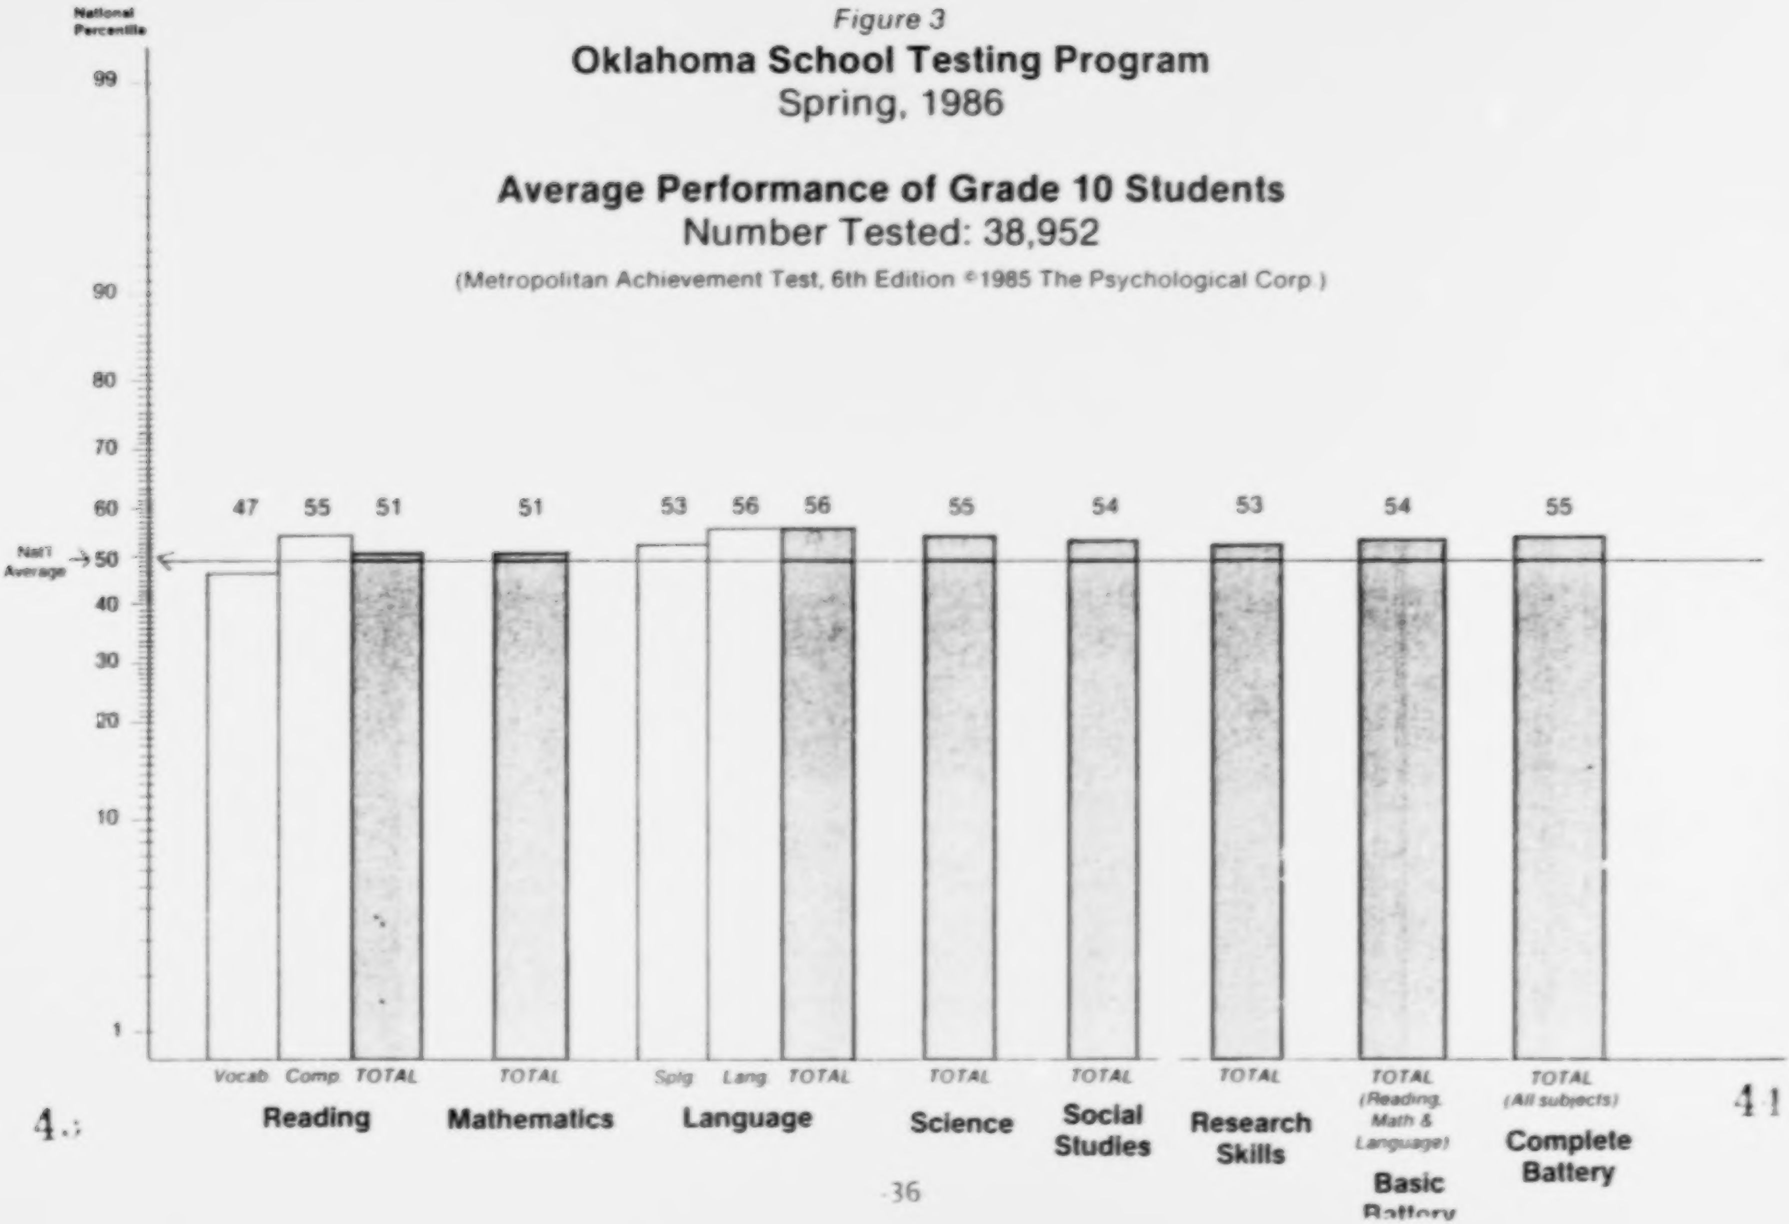
Average Performance of Grade 10 Students

Number Tested: 38,952

(Metropolitan Achievement Test, 6th Edition ©1985 The Psychological Corp.)



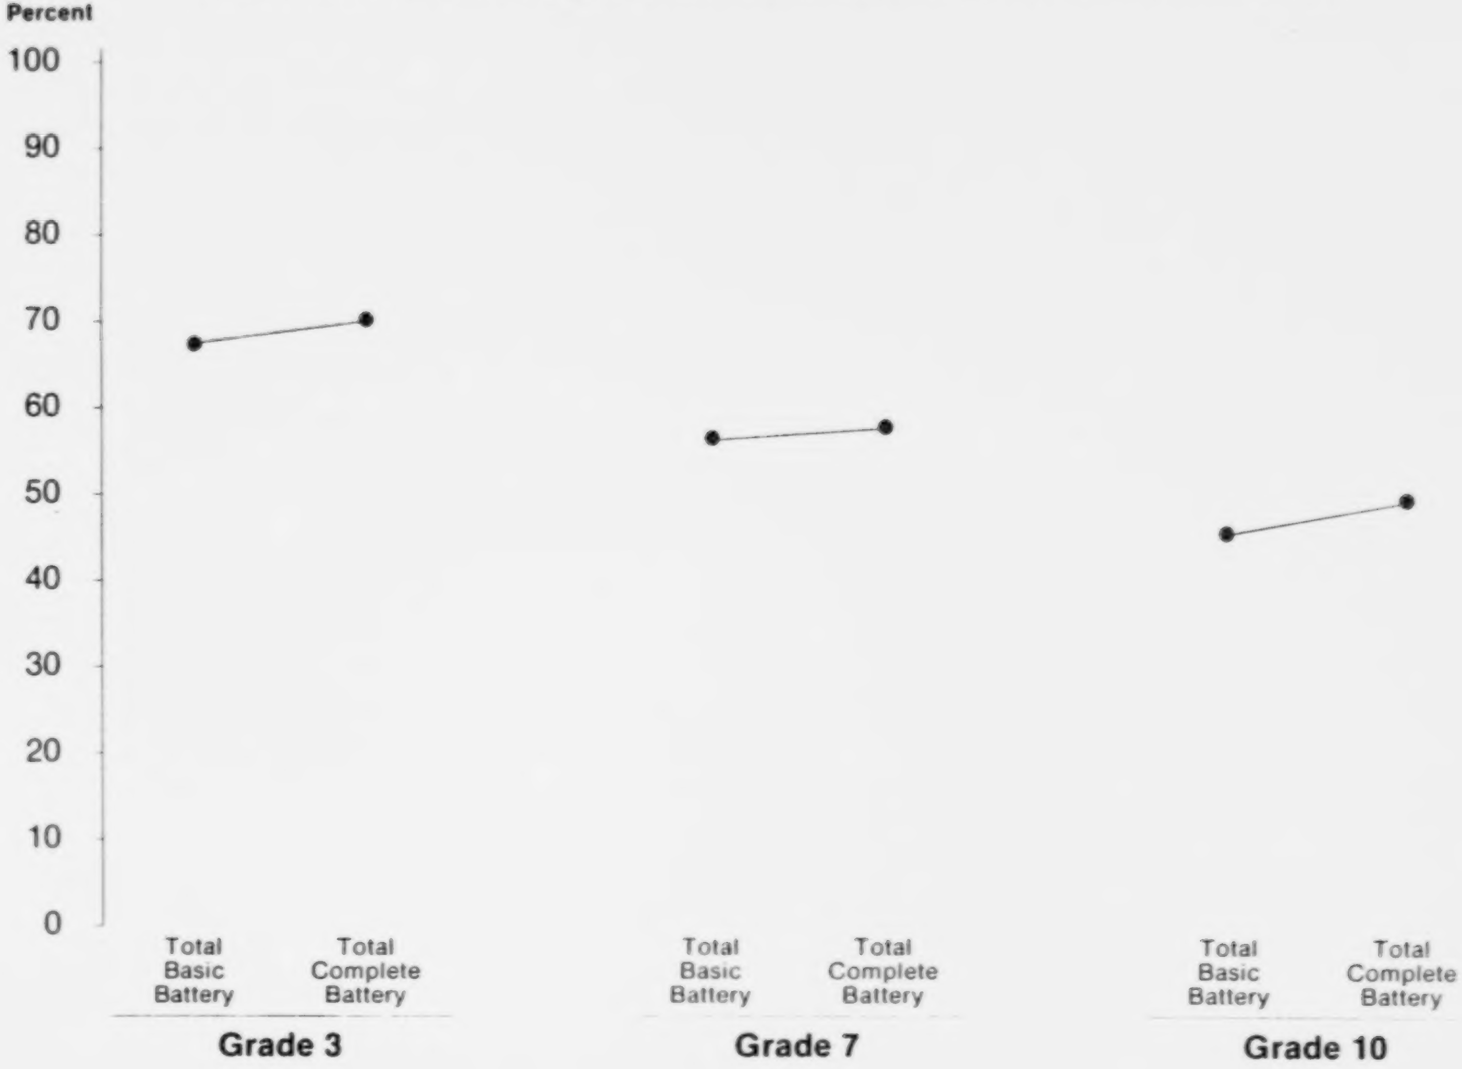
- Table 2 lists the number of school districts reported at each grade level and, of those reporting, the percent of districts in which students' average scores on Total Basic Battery and Total Complete Battery were at or above the national norm (50th percentile rank). This information is presented graphically in Figure 4 (page 38).

Table 2
Number and Percent of Total Districts Reported Which Are Achieving Above The National Norm of 50th Percentile Rank

Grade Level	Number of School Districts Reporting	Total Basic Battery (Reading, Math, and Language Arts)		Total Complete Battery (All Subjects)	
		Number	Percent	Number	Percent
3	600	402	67%	422	70%
7	588	334	57%	342	58%
10	448	203	45%	218	49%

Figure 4

Percent of Total Districts Reported Which Were Achieving Above the National Percentile Rank of 50



- Figure 5 (page 40) illustrates the performance summary of OSTP participants at each grade level in the Higher Order Thinking Skills. As was discussed in Section II-C of this report, these skills require students to compare, contrast, synthesize, or evaluate knowledge; to demonstrate the ability to analyze their thinking processes or to derive the solution rule in order to answer the test item. Such skills are needed to achieve success in many of the courses for (a) high school graduation, (b) vocational-technical training, and (c) most of the trades and/or professions students will pursue in life.

  Students' scores were reported as falling into one of three categories based on the number of items each was able to answer correctly. These categories are listed below; the accompanying national norm bands are given for each:

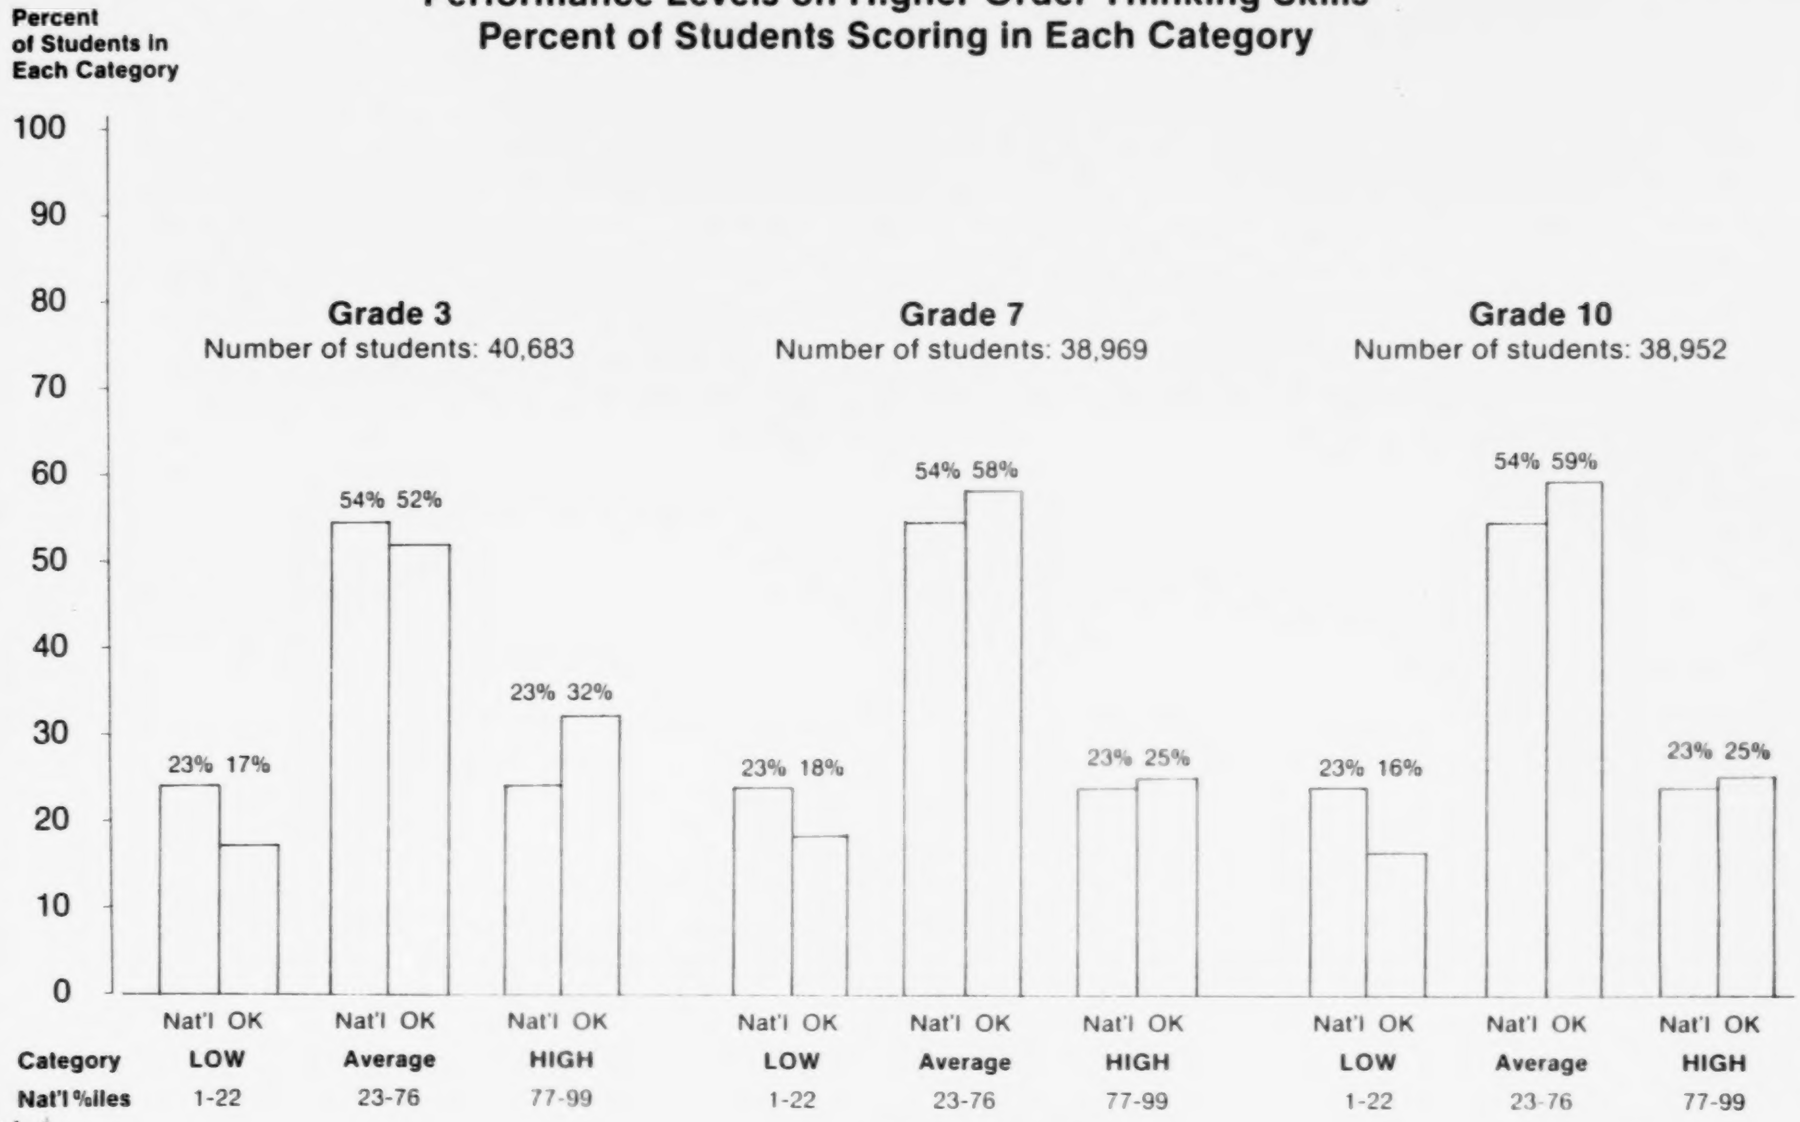
CATEGORY	EQUIVALENT STANINES	EQUIVALENT PERCENTILE RANK GROUPINGS	% of STUDENTS EXPECTED TO SCORE IN EACH CATEGORY
LOW	1--3	1--22	23%
AVERAGE	4--6	23--76	54%
HIGH	7--9	77--99	23%

  In comparison with national norms, fewer of Oklahoma's students scored in the "LOW" category, and a greater number scored in the "HIGH" category. In regard to the Higher Order Thinking Skills, it appears that Oklahoma students generally performed at a higher level than those in the national norm group.

- The Oklahoma State Department of Education, with the aid of statewide committees of teachers and school administrators, developed and validated the Suggested Learner Outcomes for grades 1-12. These Suggested Learner Outcomes (SLO's) are learning objectives considered by Oklahoma educators as appropriate for students at the various grade levels. Performance of students on each of the SLO's (in all five basic skill areas) as measured by the MAT-6 is summarized in Table 4 (page 43).

Figure 5

Performance Levels on Higher Order Thinking Skills
Percent of Students Scoring in Each Category



Not all of the Oklahoma SLO's were measured by the MAT-6 due to the following conditions:

- the MAT-6 was not customized for use solely in Oklahoma; it is a standardized, norm-referenced test developed for use throughout the United States

- not all of the SLO's are measurable by a multiple-choice, group-administered test format (e.g., "oral reading" as a learner outcome is not measurable by a pencil-and-paper test).

Percentages of measurable SLO's which were measured by the MAT-6 are given in the following chart (e.g., 74% of the measurable SLO's for 3rd grade reading were measured by collective items from all subtests of the Elementary Level MAT-6 test taken by Oklahoma's 3rd grade students):

	READING	LANGUAGE	MATHEMATICS	SCIENCE	SOCIAL STUDIES
Gr. 3	74%	75%	81%	84%	60%
Gr. 7	72%	67%	79%	52%	53%
Gr. 10	62%	33%	43%	57%	38%
TOTALS:	70%	56%	55%	58%	44%

Table 3 (page 42) lists the number of SLO's measured by the tests as well as the number and percent of total SLO's on which Oklahoma students performed at higher levels than did students in the national norm group. To obtain scores for estimating performance on the SLO's, items which measured each given SLO were drawn from all of the five subtests. Item data from these "clusters" of items were treated as though they constituted a test for each specific SLO. The scores yielded by this process represent percentage of items answered correctly for each SLO, based on 100% (e.g., in math at the 7th grade level, of the 22 SLO's measured by the tests, Oklahoma students scored above national norms on 18, for a total of 82%).

Table 3

Number (of total) and Percent of Oklahoma's Suggested Learner Outcomes On Which Student Performance Was at or Above National Norms

Grade Level	Reading		Language Arts		Mathematics		Science		Social Studies	
	# Tot.	%	# Tot.	%	# Tot.	%	# Tot.	%	# Tot.	%
3	14/14	100	9/9	100	16/17	94	16/16	100	6/6	100
7	13/13	100	7/8	88	18/22	82	28/30	93	22/29	76

- Table 4 (page 43) illustrates performance levels of Oklahoma students as compared with the national norm group on the items which comprise each subject or skill area subtest administered. Listed for each test are (a) the total number of items appearing on the test, and (b) the number and percent of items on which students scored significantly higher or lower than the national norm.

In summary, it appears that the Oklahoma students who were administered the MAT-6 at grades 3, 7, and 10 are performing well in comparison with national norms. Of the 26 subtests administered at the three grade levels, only on one--Vocabulary at grade 10--were students' performance levels indicated to be below national norms.

Performance of grade 3 students exhibited the greatest difference in the Oklahoma-to-national-norm comparison. In Language, Science, Social Studies, Research Skills, and Total Reading, this group was performing at the 6th Stanine--a level which clearly approaches significance (given the large number of students tested).

Performance at grades 7 and 10 was slightly above national norms, with grade 7 students demonstrating the greater proficiency of the two groups. However, in all subtests at both grade levels, students' performance is within the broad average range covered by the 5th Stanine.

Table 4

IV. Directions for the Future

House Bill 1466 calls for use of the OSTP data to improve instructional programs in schools throughout the state. The State Department of Education will provide a variety of services to aid with this process.

A. Post-Test Inservice Program

A post-test inservice program will be offered in the summer and fall of 1986 for all teachers, building and district test coordinators, and school administrators serving grades 3-4, 7-8, and 10-11. Separate sessions will be offered to serve the needs of each grade-level grouping. These inservices will include the following topics:

- Interpretation of the Test Data Reports
- Analysis of Test Data to Determine Needed Changes (methodology)
- Specific Activities for Remediation and Skill Reinforcement
- Aid in Ways to Present Needed Changes and Innovations in the Five-Year School Improvement Plan.

To prepare for this inservice, The Psychological Corporation has developed materials which are customized to the specific needs of the Oklahoma School Testing Program and the follow-up work which will take place at the local school level. Such publications include Interpreting the Reports: A Guide and inservice manuals which are designed to aid schools in use of test data at the local level (one manual each, specifically designed for use in grades 3-4, 7-8, and 10-11). These materials will be made available at the rate of one each per inservice participant (based on the appropriate grade level served).

In addition, The Psychological Corporation is providing a two-part seven-day training program for the State Reading Staff Members who will be conducting the inservice. Inservice packets are being developed for use in offering workshops to school personnel.

B. Follow-up Conferences and Inservice at the Local School Level

The Department will provide aid to schools in the form of informal meetings and workshops throughout the 1986-87 school year. These sessions will focus on the specific needs of schools at the class, building, and district levels. At the request of school administrators, Department personnel will aid in analysis of data, determining specific needs, developing plans for enhancing local instructional programs, and ways to reflect these innovations in each school's Five-Year School Improvement Plan.

No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the publisher. Printed in the United States of America.

The Purpose

This interpretive guide is designed to help you understand, explain, and use the results of the Oklahoma School Testing Program. In the Oklahoma program, pupil scores are reported by subject and test at the individual and classroom levels, then aggregated to the school, district, and state levels.

This Guide describes the tests used for the Oklahoma School Testing Program, discusses the individual and classroom reports, describes each of the scores they display, and suggests ways in which the test results may be used. It should be remembered that test scores are only one measure of a student's ability and should be used together with other information about the pupil's achievement. The teacher's knowledge of student characteristics that might influence test performance should be considered when interpreting individual test scores.

For grades 3, 7, and 10, the Oklahoma State Board of Education adopted the *Metropolitan Achievement Tests*, 6th edition (MAT6), copyright © 1985, The Psychological Corporation, Harcourt Brace Jovanovich, Inc., in fulfillment of the legislative mandate (70 O.S. 1981 , 1210.505 et. seq.). There are three levels of the test that are used in the Oklahoma School Testing Program. At grade 3, all students take the *Metropolitan Achievement Tests*, Elementary level, known as "MAT6 Elementary"; at grade 7, all students take the Advanced 1 level; at grade 10, all students take the Advanced 2 level.

The Tests

The *Metropolitan Achievement Tests* are overall measures of achievement in the basic skills of reading, mathematics, language arts, science, and social studies. In the Oklahoma School Testing Program, all of these skills are tested. These tests are nationally normed tests and, as such, are designed to be administered on a group basis to students functioning in the mainstream classroom. The norming sample included exceptional students in proportion to their appearance in the national school population (except those designated as Trainable Mentally Handicapped or Severely/Profoundly Mentally Handicapped) to the extent it was feasible for these students to take tests under prescribed standardized testing conditions. The *Metropolitan Achievement Tests* have alternate and equivalent forms, L and M. Each equivalent form measures the same subject areas and has the same number of items. The tests are designed to measure the achievement of Oklahoma's students on a scale that allows comparison to a national norm sample, which was selected to be representative of the nation's students in each of the grades tested. Thus, as norm-referenced tests, the tests provide a method for comparing the achievement of pupils in any class with that of typical pupils of the same age and grade.

The third-grade test, MAT6 Elementary, includes three reading tests: Vocabulary, Word Recognition Skills, and Reading Comprehension. These three reading tests combine to yield a Total Reading domain score. There are three mathematics tests: Mathematics: Concepts, Mathematics: Problem Solving, and Mathematics: Computation. These mathematics tests combine to yield a Total Mathematics domain score. In the Language area, there are two tests: Spelling and Language, which combine to yield a Total Language domain score. The scores on these three domains combine to yield a Total Basic Battery score. When Science and Social Studies are also administered, as they are in the Oklahoma School Testing Program, a Total Complete Battery score is derived from the five domains. The Complete Battery also yields a Research Skills score.

The seventh-grade test, MAT6 Advanced 1, includes only two reading tests, Vocabulary and Reading Comprehension, which combine to yield a Total Reading score. The other tests at this level are the same as those described above for the grade 3 test, MAT6 Elementary.

The tenth-grade test, MAT6 Advanced 2, includes two reading tests — Vocabulary and Reading Comprehension, a Mathematics test, a Spelling test, a Language test, a Science test, and a Social Studies test. The Reading Comprehension and Vocabulary tests combine to yield a Total Reading score. The Language and Spelling tests combine to yield a Total Language score. Total Basic Battery and Total Complete Battery scores, as well as a Research Skills score derived from the Complete Battery, are also provided, based on the test combinations described for the lower two levels.

Ten reports, displaying MAT6 test results, are provided for individual, classroom, and building use by the Oklahoma School Testing Program. These are: a) Individual Report, b) Class and Building Summaries, c) Parent Report, d) Master List of Test Results, e) Class and Building Summaries of the Master List of Test Results, f) Ranked List of Three Scores, g) Group Item Analysis, h) Administrator's Data Summary, i) Frequency Distribution, and j) Oklahoma Learner Outcomes Report. The Oklahoma School Testing Program also provides a gummed Record Label for each student tested. The labels show the same scores as are listed on the Master

List of Test Results. Descriptions and suggested uses for each of the reports, except the Record Label, appear in "The Reports" section of this Guide. The scores displayed on each of these reports are described in the next section. The reports illustrated in this Guide show the placement of the various scores on the reports you receive. However, all sample reports contain simulated data. The illustrations of the Individual Report, the Parent Report, and the Class Summary are for grade 3, MAT6 Elementary. All other reports illustrated are for grade 7 or 10.

The Scores

Thirteen scores are used to report the MAT6 test results. These are: A) raw scores, B) scaled scores, C) national percentile ranks, D) national stanines, E) national normal curve equivalents, F) local percentile ranks, G) local stanines, H) Instructional Reading Levels, I) Instructional Mathematics Levels, J) content cluster performance indicators, K) percent by content cluster performance indicators, L) percent correct values, and M) grade equivalents. Definitions, uses, and limitations of each of these are presented in this section. Each score is identified with a letter which corresponds with the location of that score on the report forms described in "The Reports" section.

A. Raw Scores

Definition. A raw score is the number of questions answered correctly for a cluster, test, domain, or total battery.

Uses. The raw score provides an indication of the variability in performance among pupils in the classroom. Raw scores are converted into derived or norm-related scores such as percentile ranks and scaled scores, which are described later.

Limitations. A raw score by itself has no meaning. Because tests differ in length, content, and difficulty, raw scores across tests or test levels cannot be compared directly. Furthermore, although the forms within a level have been constructed to be equivalent, small variations in the difficulty of the questions may lead to raw score differences from form to form. A raw score, then, must always be interpreted in relation to the set of questions on which the score was earned. Because of this, raw scores provide limited information about the relative performance of students.

B. Scaled Scores

Definition. Scaled scores represent approximately equal units on a continuous scale using numbers which range from 001 through 999. Scaled scores facilitate conversions to other score types and are suitable for studying change in performance over time. The MAT6 scaled score system links together the levels at which common content domains are tested. While scaled scores are equivalent across forms and levels of the same test or domain total, they are *not* equivalent from one subject to another; hence, as an example, a scaled score on Reading Comprehension should never be compared to a scaled score on Spelling.

Uses. Scaled scores have the advantage of representing approximately equal units on a continuous scale. When using scaled scores, a difference of 5 points between two students' scores represents the same amount of difference in performance wherever it occurs on the scale. Once a raw score has been converted to its scaled score, it is not necessary to be concerned with the level or form that was taken when the percentile rank, stanine, or grade equivalent for that score was obtained. This makes scaled scores especially suitable for comparing scores when different forms or levels have been administered and for studying change in performance over time.

Limitations. Scaled scores are not directly comparable across test areas (Reading, Mathematics, Language, etc.); they, like raw scores, have no intrinsic meaning and cannot be interpreted without reference to other information.

C. National Percentile Ranks

Definition. Percentile ranks indicate the relative standing of a pupil in comparison with other pupils of the same grade in the norm (reference) group who took the test at a comparable time. Percentile ranks range from a low of 1 to a high of 99, with 50 denoting average performance for the grade. The percentile rank corresponding to a given score indicates the percentage of students in the same grade obtaining scores equal to or less than that score.

Uses. Percentile ranks are useful for comparing a student's performance on a particular test relative to the performance of a national sample of students. Percentile ranks are also useful for comparing a student's performance across content areas in a score profile.

Limitations. Percentile ranks do not represent actual amounts of ability. Further, they do not represent equal units along the score scale. For example, the difference between percentile ranks of 5 and 10 does not necessarily reflect the same difference in ability as the difference between percentile ranks of 50 and 55. Since percentile ranks do not represent equal units, and since their interpretation is limited to the reference group from which they were derived, they are best used for reporting scores when position in the reference group is of primary interest.

D. National Stanines

Definition. Stanines are scores that range from a low of 1 to a high of 9, with 5 designating average performance. Stanines, like percentile ranks, indicate a student's relative standing in the norm group. However, since stanines represent approximately equal units of ability, they are particularly useful for comparing a student's score across tests in a stanine profile.

Uses. Because of their equal-interval property (where the difference between stanines 2 and 4 represents about the same difference in ability as the difference between stanines 5 and 7), stanines make it easy to identify broad performance categories. Stanine scores of 1, 2, and 3 are usually considered to reflect below-average performance; 4, 5, and 6 are generally thought of as average; and 7, 8, and 9 are above average. The relationship between percentile ranks and stanines in a normally distributed set of scores is shown in Figure 1 below.

	4%	7%	12%	17%	20%	17%	12%	7%	4%
Stanine	1	2	3	4	5	6	7	8	9
Percentile Rank	Below 4	4-10	11-22	23-39	40-59	60-76	77-88	89-95	Above 95
NCE	1 0-10 4	13 1-23 0	24 2-33 7	34 4-44 1	44 7-54 8	55 3-64 9	65 6-74 7	75 8-84 6	86 9-99 0
	Below Average			Average			Above Average		

Figure 1. A Normal Distribution of Stanines, Percentile Ranks, Normal Curve Equivalents, and Performance Classifications.

Limitations. Stanines are less precise than percentile ranks. However, a difference of a few raw score points does not grossly affect the stanine as it may the percentile rank.

E. National Normal Curve Equivalents

Definition. The normal curve equivalent score (NCE) is derived from the percentile rank. The NCE is a type of standard score resulting from the division of the normal curve into 99 equal units.

Uses. This score is generally used for research purposes. The normal curve equivalent normalizes the percentile rank scale in order to enable the researcher to manipulate test data in various ways. Because of its interval nature, any difference, such as 5 NCEs, has the same meaning regardless of the part of the scale being referenced. There is a direct, fixed relationship between percentile ranks and normal curve equivalents, as shown in Table 1 below.

TABLE 1: Normal Curve Equivalents Corresponding to Percentile Ranks.

Percentile Rank	NCE	Percentile Rank	NCE	Percentile Rank	NCE	Percentile Rank	NCE

24	35.1	49	49.5	74	63.5	99	99.0
25	35.8	50	50.0	75	64.2		

Limitations. As a converted score, the normal curve equivalent is meaningful only in reference to the standardization sample from which it was derived.

F. Local Percentile Ranks

Definition. Local percentile ranks indicate the relative standing of a pupil in comparison with other pupils of the same grade from the local group, all of whom took the test at the same time. Like national percentile ranks, local PRs range from a low of 1 to a high of 99, with 50 denoting average performance for the local group. The percentile rank corresponding to a given score indicates the percentage of students in the same grade in the local group obtaining scores equal to or less than that score. On reports provided for the Oklahoma School Testing Program, state percentile ranks are reported as local norms.

Uses. Local percentile ranks are useful for comparing a student's performance on a particular test relative to the performance of his or her peers in the local group.

Limitations. Like national percentile ranks, local percentile ranks do not represent actual amounts of ability and are subject to the same limitations

G. Local Stanines

Definition. Local stanines are similar to local percentile ranks in that they reflect the student's standing relative to the local group rather than to the national norm group. Like national stanines, local stanines are scores that range from a low of 1 to a high of 9, with 5 designating average performance.

Uses. Local stanines also identify broad performance categories in which stanine scores of 1, 2, and 3 are usually considered to reflect below-average performance; 4, 5, and 6, average; and 7, 8, and 9, above average, when compared with the local group of the same grade.

Limitations. Local stanines are subject to the same limitations as national stanines.

H. Instructional Reading Levels

Definition. The Instructional Reading Level (IRL) is a criterion-referenced score that corresponds to the level of basal reader that affords the student the best chance of developing as a reader. The MAT6 Reading Comprehension test has been designed as a group-administered silent reading inventory specifically to estimate a student's Instructional Reading Level.

Uses. At lower school grades, the IRL can be used for placement in a basal reader and for planning instruction in reading skills that are most important for a student at a given level of reading ability. IRLs are also useful when grouping students for reading instruction. At higher school grades, the IRL is a good indication of the student's ability to benefit from instruction using graded subject-matter textbooks.

Limitations. IRLs are only estimates. The accuracy of a given IRL can be evaluated by analyzing the pattern of performance across increasingly difficult passage levels. A typical pattern would show the student answering correctly all or almost all items on passage levels *below* the IRL, approximately 60-70% of the items *at* the IRL, and less than 50% of the items *above* the IRL. An atypical pattern would be one in which there are many errors in easier material or surprising success in harder material. IRLs based on an atypical pattern should be interpreted with caution.

I. Instructional Mathematics Levels

Definition. The Instructional Mathematics Level (IML) is a criterion-referenced score that suggests the level of basal mathematics textbook that would be most appropriate for the student. For grades 3 and 7, both the Numeration strand of the Mathematics: Concepts test and the Mathematics: Computation test were carefully constructed to yield information on the student's understanding of hierarchical mathematics concepts of number and his or her ability to apply them to arithmetic computation. The IML is based on the comparison of attainment in these two dimensions. At grade 10, the Numeration strand and the Computation strand from the Mathematics test are used to determine the IML.

Uses. The IML can be used for placement in a mathematics textbook and in grouping for instruction students of similar achievement levels.

Limitations. The IML is an estimate based on only two mathematical strands: concepts and computation. Other important aspects of mathematics, such as geometry, measurement, and problem solving are not used. These should not be neglected in analyzing the student's overall achievement in mathematics.

J. Content Cluster Performance Indicators

Definition. On the Individual Report, the student's performance category on each content cluster on MAT6 is indicated, relative to the performance of a nationwide sample of students tested at the same grade level. There are three categories of performance: High, Average, and Low. Average refers to the middle 54% of the norm group; Low to the lowest 23%; and High, to the top 23%. The pupil's raw score on each cluster determines the category, which is indicated by a check mark in the appropriate column.

Uses. The check marks are used to indicate whether the student's performance on the MAT6 cluster tested was high, average, or low. By scanning the pattern of check marks, the student's areas of strengths and weaknesses can be quickly identified.

Limitations. Since the number of items measuring each cluster is necessarily limited, the reliability of scores at the cluster level is lower than the scores at the test level. Therefore, it is best to use these categories to indicate patterns of performance.

774

K. Percent by Content Cluster Performance Indicator

Definition. The Building and System Summary Reports show the percent of students achieving in each of the three performance categories for every MAT6 content cluster reported on the Individual Report. These figures are derived by dividing the number of students falling into each category — High, Average, and Low — by the total number of students tested on the cluster.

Uses. Percent by performance indicators show the percentage of students at a grade level whose performance on the MAT6 skill tested can be categorized as high, average, or low. This can be useful in determining instructional groups.

Limitations. As with the Performance Indicators, percents by category are best used to reflect patterns of performance. Small differences in percentages from cluster to cluster probably do not reflect meaningful differences in performance.

L. Percent Correct Values

Definition. The percent correct shown on the Group Item Analysis Report expresses the percent of pupils in the national norm group who answered an item or a group of items correctly. This score is sometimes referred to as a *p* value.

Uses. The percent correct value affords a comparison of the degree of difficulty of specific test content. At the same grade and time of year, an item with a percent correct of .60 has been answered correctly by 20% more of the students in the norm group than an item with a percent correct of .40, and is, therefore, an easier item. Percent correct values can also be used to compare local group performance to that of the norm group.

Limitations. Percent correct scores should not be compared for different content areas since these areas may vary in underlying difficulty.

M. Grade Equivalents

Definition. A grade equivalent (GE) is a score that represents the average performance of students tested in a given month of the school year. The score is expressed in terms of a grade level and school month, with each school month representing one tenth of the school year. For example, a grade equivalent of 3.2 would represent the typical performance of the national sample of third graders taking the MAT6 in the second month of the school year. The MAT6 grade equivalent scale ranges from K.0 (beginning kindergarten) to 12.9. Scores below K.0 are designated PK (pre-kindergarten), and scores above 12.9 are designated PHS (post high school). MAT6 grade equivalents were derived from the median performance of the fall and spring standardization samples.

Uses. Grade equivalents are used most effectively in comparing students with a national sample across grades, levels, and forms of a test.

Limitations. A serious problem with grade equivalents is their frequent misinterpretation. If a third grader obtains a grade equivalent of 7.9 on a mathematics test designed for third graders, for example, this does not mean that the student has mastered seventh-grade mathematics. While this student's performance may be superior to most third graders, the level of attainment is not necessarily typical of that of a seventh grader. The GE of 7.9 simply means that this student's score is about the same as the typical score seventh graders would have had if they had taken the third-grade test in the ninth month of the school year.

A second limitation is that grade equivalents cannot be used to compare performance across tests or domains. In addition, grade equivalents do not represent an equal interval scale. For example, the difference between GEs of 10.0 and 10.5 does not reflect the same difference in ability as the difference between 6.0 and 6.5.

In general, GEs more than two years above or below a student's actual grade placement have very little meaning. They should be interpreted as simply "well above" or "well below" average.

The scores described above provide different ways of identifying strengths and weaknesses of students and groups of students. The various scores also provide numerous ways to determine how well each pupil is meeting the instructional objectives specified for his or her grade.

In addition to these scores, two other scores are provided with the MAT6 test results. These are the Higher Order Thinking Skills Score and the Research Skills Score. The Higher Order Thinking Skills Score is derived from combinations of items across various MAT6 tests. These require the student to compare, contrast, synthesize, or evaluate knowledge, to demonstrate metacognition, or to derive the solution rule in order to answer the item. The MAT6 Compendium of Instructional Objectives lists by item number within tests all the items at each test level that have been included in the Higher Order Thinking Skills cluster.

Like the Higher Order Thinking Skills Score, the Research Skills Score is derived from combinations of items across several MAT6 tests. The score is produced from the Graphs & Statistics items in the Mathematics: Problem Solving test (Mathematics test at Advanced 2), the Reference Skills items in the Language test, and the Inquiry Skills and Critical Analysis items from the Science and Social Studies tests.

The following section describes the individual and classroom reports provided by the Oklahoma School Testing Program. Note that the various scores on each report are identified with a letter which corresponds to the preceding score descriptions.

The Reports

At grade 3, eight different kinds of classroom reports are provided. These include: an Individual Pupil Report and a Parent Report for each pupil who took the tests; and one copy each of the Class Summary of the Individual Reports, the Master List of Test Results, the Class Summary of the Master List, a Group Item Analysis Report, a Ranked List of Three Scores Report, and an Oklahoma Learner Outcomes Report.

At grades 7 and 10, buildings will receive Individual Pupil Reports and Parent Reports. The remaining reports cited for grade 3 will be generated and distributed at the building level, across all classes at the grade. All grades will also receive, in addition to those reports mentioned, an Administrator's Data Summary. In those school systems with enrollments greater than 2,200 students, a Frequency Distribution Report will also be provided at grades 3, 7, and 10.

Individual Report

The Individual Report illustrated on page 10 details a student's performance by cluster, test, domain (subject), and battery total. It is divided into four sections: a) student identification, b) test, domain, and battery scores, c) special scores, and d) content cluster analysis. Ten scores are used to report student performance. On the sample report, each score is identified with a letter which corresponds with the preceding score descriptions.

The student identification area in the first section of the report is self-explanatory. It shows the student's name, school, system, and grade. It also shows the normative grade level at which the MAT6 test taken was standardized and the level and form of the test administered.

The second section of the report displays the student's raw score, national percentile rank and stanine, national normal curve equivalent (NCE), local percentile rank and stanine (with the state percentile rank and stanine being reported as local percentile rank and stanine), and grade equivalent for each MAT6 test, domain, and battery total. The norm-referenced scores permit comparison of individual student performance to that of the national norm group. The percentile bands to the right of these scores display graphically the student's percentile rank scores. The bands, spanning ± 1 standard error of measurement, serve as a visual representation of the student's strengths and weaknesses relative to the norm group in each of the areas tested. By comparing any two bands, it can be determined whether the student did better in one subject area than in the other. If the two bands do not overlap, it may be concluded that the difference between the two scores is meaningful.

The first box in the third section of the report displays the student's Instructional Reading Level, as well as the Independent Reading Level and the Frustration Reading Level for this pupil. Although textbooks are usually at the Instructional Reading Level, where the student is challenged but can learn with teacher assistance, material at the Independent Level can be read comfortably by the student, with no help from the teacher. The student has a great deal of difficulty reading material at the Frustration Level, even with assistance.

The second box in this section shows the Reading Comprehension Performance by Grade Level of Reading Passage. The accuracy of the assigned IRL can be evaluated using this information. The third box shows the performance indicator (High, Average, Low) for the Higher Order Thinking Skills score. The last box gives the Instructional Mathematics Level.

The last section of the report lists the MAT6 content clusters. Following each cluster is the number of items in that cluster that the student answered correctly (raw score) and the total number of items in that cluster (number possible). Displayed to the right of these scores are the check marks indicating performance on each cluster.

Special attention should be paid to the diagnostic information obtainable from the cluster scores in the three mathematics tests. Clusters from Problem Solving, for example, can be compared to similarly worded clusters from Computation. Since the computational difficulty is the same in these clusters, it is possible to examine the difference in performance between the two tests on the same cluster to see whether low achievement in problem solving can be traced to difficulty with the computation required or whether there is another cause for poor performance.

776

Other clusters in the Problem Solving test can provide additional insights into where difficulties in this area may lie. At the Elementary level (grade 3), the test reports on items that the student had to READ versus items that the student had to LISTEN to. These sets of items were also based on matched computational objectives. A low READ score may indicate that the student could do problems presented orally but not those presented in a printed format. This may suggest too low a level of reading ability to handle the material. However, further diagnostic testing sometimes shows that the reading level is adequate or even good, but the student is unable to translate the verbal problem into an arithmetic one. A comparatively low LISTEN score may suggest that the student is more dependent upon reading skills and no longer learns well in the listening mode.

At the Advanced 1 level (grade 7), as well as at the Elementary level (grade 3), a comparison of performance on CHOOSE vs. SOLVE items may also be helpful. Test items, also matched on computational difficulty, were presented in these two formats: SOLVE items require the student to select the correct solution or answer to the problem; CHOOSE items require the student to select the number sentence that shows how to solve the problem, without having to complete the computation. A student whose performance is comparatively poor on CHOOSE items may be able to do problem solving items by rote without understanding the underlying reasoning. On the other hand, a student who performs poorly on SOLVE items (but well on CHOOSE items) may be making careless computational errors, although he or she understands how to solve verbal problems. A look at the performance on the other mathematics tests will indicate how well the student understands the underlying concepts and computation.

At the Advanced 2 level (grade 10), there is only one mathematics test. Some diagnostic information is still obtainable, however, by making appropriate comparisons among the clusters within the test.

Teachers can use the scores on the MAT6 Individual Report to determine each student's level of achievement in the content tested. It thus becomes possible to identify each student's strengths and weaknesses by using the information on this report. It is important to remember that test scores are but one source of information about the student's progress and achievement. Consequently, the test scores reported on the MAT6 Individual Report should be used together with other information about student achievement that has been gathered throughout the school year.

Class Summary

This report presents a summary of average scores on each test and total for the class (grade 3 only), building, district, and state in terms of raw score, national percentile rank and stanine, normal curve equivalent (NCE), local (state) percentile rank and stanine, and grade equivalent. Performance indicators on content clusters are summarized by the number of students in each performance category: low, average, and high. Also summarized are the percent of students at each Instructional Reading Level and Instructional Mathematics level active at the grade. A sample of the Class Summary is displayed below to help in locating the various scores reported. The letters used to identify the scores are keyed to the score descriptions in "The Scores" section of this Guide.

Parent Report

The Parent Report presents test results to parents. In addition to student identification information that appears at the top of the report, the report lists the names of MAT6 tests and totals and the raw score, national percentile rank and stanine, and local percentile rank and stanine (state percentile rank and stanine) associated with each. This information is followed by a graphic display of the student's percentile rank scores to serve as a visual representation of the student's strength and weaknesses as compared with the norm group. A narrative interpretation of these scores appears in the middle of the page. It is followed by a letter to the parent from the State Superintendent of Public Instruction.

The sample report that follows has each score identified to correspond with the score description in "The Scores" section.

Master List of Test Results

This report presents by classroom or grade within building, students' individual scores on each test and total in terms of raw score, scaled score, national percentile rank and stanine, national normal curve equivalent, local percentile rank and stanine (state percentile rank and stanine), and grade equivalent. In addition, Instructional Reading Levels and Instructional Mathematics Levels are provided.

The Master List of Test Results may be used to compare student performance with that of the norm group. A sample of the Master List of Test Results is displayed below. The letters identifying the scores correspond with the score descriptions in the preceding section.

Summary of the Master List of Test Results

This report summarizes for the grade 3 classroom and for grades 7 and 10 in each building the test, domain, and battery information given for individual students on the Master List. In addition to mean raw scores, mean scaled scores, mean national NCEs, median grade equivalents, and national and local (state) percentile ranks and stanines derived from the mean NCEs, the data will be summarized by stanine categories (Above Average, Average, Below Average), and quartiles (numbers and percents of cases falling into 1-25, 26-50, 51-75, and 76-99 percentile rank bands).

The Summary of the Master List of Test Results may be used to compare total class performance with that of the norm group. Ranked List of Three Scores

The Ranked List of Three Scores for each classroom (grade 3) and grade within building (grades 7 and 10) covers all the domain scores (e.g., Total Reading). The students are ranked from high to low (by scaled score) according to their performance in each of the domains. Also reported for each student is his or her raw score, national percentile rank, national stanine, and national normal curve equivalent.

This type of report is most frequently used to determine eligibility into special programs and can be helpful in grouping for instruction students at similar achievement levels. Samples of the report and its summary are shown on pages 15 and 16. Each score is identified with a letter that corresponds with the score descriptions in "The Scores" section of the Guide.

Group Item Analysis

The Group Item Analysis reports the objective wording and the percent-correct data for each item for the local group and for the national norm group. Similar information is summarized by cluster as well. The percent of students in the local group failing to answer an item (Percent Omits) is indicated. Also reported for each item is an indication as to whether the performance of the local group was significantly different from that of the national. An arrow pointing upward signifies that local performance was better than national; an arrow pointing downward signifies that it was worse.

A sample of the Group Item Analysis Report is shown below. Each score is denoted by a letter which corresponds to the description of the score found in "The Scores" section of this Guide.

Administrator's Data Summary

The Administrator's Data Summary Report provides a wealth of summary information for groups of students by building and district and at the state level. Among the scores displayed for each test, domain, and total battery are means, standard deviations, and percentiles (10th, 25th, 50th, 75th, and 90th) in terms of raw scores, scaled scores, and NCEs; percentiles in terms of grade equivalents; number and percent of students achieving in percentile ranges (1-25, 26-50, 51-75, 76-99); and stanine categories (Above Average, Average, and Below Average).

In addition, there are other types of summaries provided which are not illustrated, as the sample report below shows only one page of a multi-page document. These additional scores, however, are similar to scores and summaries already described for other score reports. The scores in the sample report are lettered for easy reference to the descriptions, which appear in "The Scores" section of this Guide.

Frequency Distribution Report

This report provides, for each grade in each system with an enrollment greater than 2,200 students, a unit interval frequency distribution of national percentile ranks and corresponding national normal curve equivalents with frequencies and cumulative percents for each test and total. The state percentile rank is reported for each active national percentile rank and corresponding national normal curve equivalent. A sample report is illustrated below. The letter denoting each score refers to the definition of the scores found in "The Scores" section of this Guide.

Oklahoma Learner Outcomes Report

This report lists Oklahoma instructional objectives for each domain and the number and percent of items related to each objective answered correctly by each student in the class (grade 3) or in the grade (grades 7 and 10). Also provided for each objective are the total number of items (number possible) and the mean percentage of items answered correctly by students in the norming sample. Class and building summaries show the number of items possible for each objective within a domain, as well as the number of students tested, the mean raw score, the mean percent of items answered correctly, and the national mean percent answered correctly by students in the norming sample. Samples of the class list report and class summary are reproduced on pages 21 and 21.
